Release note for version 3.1 of the EU VNeeS Specification (Sep 2023)

Section of the document	Change
7.(a) General considerations and 7.(i) Files	Validation of the folder path length is now verified as Best Practice criterion for the folder "add-info" (additional information). The folder continues to be not subject to any other technical validation criteria. The change aims to avoid a technical block for processing of submissions due to path length issues. This is specifically relevant for SRP submissions as the folder path of related previous electronic submissions does not start in the root folder but in the "add-info" folder below.
Technical validation checklist: VNeeS_006	A warning will be issued for the "add-info" folder, if the total length of folder path for any file within this folder does exceed 180 characters.
